

Directions for mounting WATER SLIDE decals

- 1) Remove needed decals from the protective bags. Always store the unused decals in sealed bags and/or in an air tight covered container (i.e. Rubbermaid or Tupperware) to prevent plasticizer loss in the decals.
- 2) Wash area to be decaled with a mild detergent, rinse and let dry. A clean surface is imperative for achieving a superior bond.
- 3) Cut decals apart and trim excess paper from around each decal to be mounted.
- 4) Dip decal in warm water for a few seconds.
- 5) Place wet decal face up on a moist paper towel and wait until the decal slides freely on the paper.
- 6) Place decal face up in position on object to be decaled, and slide the backing paper off leaving decal in position.
- 7) Gently slide decal into final position and press out any air bubbles with a soft damp cloth. Don't press too hard. It will force the adhesive out from under the decal. Take care not to stretch the decal out of shape.
- 8) Some milkyiness will be evident on dark surfaces. This is good because it is the adhesive and it will clear.
- 9) Wipe away excess adhesive and then do not touch the decal until firmly dry about 12 hours. With up to 24 hours on large images (2 inches x3 inches or larger).
